

Multi-Valve Water Inlet System

The purpose is to eliminate moving hoses from the coach inlet to the black and/or grey tank flush system. The solution was to purchase a multi-valve sprinkler controller from Home Depot, and if desired a quick disconnect for connecting the city water line. Mount the multi-valve in a convenient location after installing the male portion of the quick disconnect if you are going to use it. You can see in the PIC ours, points downward. Attach the coach water inlet to one of the valves. Install a hose from another of the valves to the black tank flush inlet, and if available another hose to another valve for a grey tank flush inlet.
